

WHAT IS CLAIMED IS:

1. A service providing method for providing services to a first portable electronic device holder via the terminal device that
5 handles the portable electronic device, based on the first portable electronic device having a memory storing application data relative to the service provision and pre-storing individual data of a holder by a prescribed organization, the service providing method comprising:

10 checking justifiability of the first portable electronic device based on the data stored in the first portable electronic device when the directive data for the application downloading from the terminal device;

15 demanding the setting of a portable electronic device to download the application data when the first portable electronic device is confirmed to be justifiable;

20 reading out application data desired by a holder from the memory when receiving data showing the completion of setting the first portable electronic device or a second portable electronic device differing from the first portable electronic device as a portable electronic device in which an application is downloaded; and

transmitting the read application data to the terminal device by directing download of the application to the portable electronic device that is set as described above.

25 2. The service providing method according to Claim 1,

wherein the transmission step includes:

transmitting the read out application data in the unusable state; and

changing the application downloaded in the portable electronic device from the unusable state to the usable state when the data showing the normal completion of the download is received after transmitting the application data.

3. The service providing method according to Claim 1, further comprising:

checking whether it is possible to download an application data desired by a holder relative to the memory capacity of the set first or second portable electronic device when the data showing the completion of the setting of the first portable electronic device or a second portable electronic device differing from the first portable electronic device is received as a portable electronic device to which the application is downloaded;

demanding the setting of another portable electronic device for downloading an application data when the download is judged being not possible as a result of the above capacity checking; and

reading the application data and transmitting the read application when the download is judged to be possible.

4. The service providing method according to Claim 1, wherein the above-mentioned reading step includes:

judging whether the set portable electronic device is the first

portable electronic device or a second portable electronic device
differing from the first portable electronic device when a data
showing the setting completion of the portable electronic device to
which an application is downloaded is received; and

5 creating data relative to the individual data stored in the first
portable electronic device and directing to store this relative data in
the second portable electronic device when the set portable
electronic device is judged to be the second portable electronic
device in the judging step;

10 wherein when the set portable electronic device is judged to be
the first portable electronic device in the judging step or when the
data showing the completion of storage of relative data in the second
portable electronic device is received, reading out application data
desired by a holder from the memory.

15 5. The service providing method according to Claim 1, further
comprising:

 demanding the provision of data including at least individual
data stored in the portable electronic device when the provision of
20 service using the portable electronic device is directed by the
terminal device;

 checking whether a user has the right to receive the services
based on the data stored in the portable electronic device when the
data is received;

25 providing service data desired by a holder when the holder is
judged to have the right to receive the services as a result of the

above checking; and

informing the terminal device to execute the download of an application required for receiving the service when the holder is judged to have no right to receive the services as a result of the

5 above checking.

6. The service providing method according to Claim 5, further comprising:

presenting desired services to the member in the first form to
10 provide service data at the first price indefinitely and the second form to provide service data at prices lower than the first price for a limited period; and

directing the download of service data to the portable electronic device when the first form is selected when the service
15 data providing forms are presented and directing the download of service data and data relative to the using period to the portable electronic device when the second form is selected.

7. A service providing system for providing services to a
20 holder of the first portable electronic device via the terminal device handling the portable electronic device using the first portable electronic device pre-storing at least individual data of the holder by a prescribed organization, comprising:

means for storing application data relative to the provision of
25 services;

means for receiving the direction for the application

downloading from the terminal device and various data transmitted from the holder;

justifiability check means for checking justifiability of the first portable electronic device based on the data stored in the first portable electronic device received by the receiving means when the download direction is received by the receiving means;

setting demand means for demanding the setting of a portable electronic device to download application data when the first electronic device is confirmed justifiable by the justifiability check means;

means for reading application data desired by the holder from the storing means when data showing the completion of the setting of the first portable electronic device or the second electronic device differing from the first electronic device is received by the receiving means as a portable electronic device for downloading applications; and

means for transmitting the application data read by the reading means by directing the download of the application for the set portable electronic device to the terminal device.

8. The service providing system according to Claim 7, wherein the transmitting means includes:

means for transmitting the application data read by the reading means in the unusable state; and

means for changing the application downloaded in the portable electronic device from the unusable state to the usable state when

the data showing the normal completion of the download is received by the receiving means after transmitting the application data by the transmitting means.

5 9. The service providing system according to Claim 7, further comprising:

capacity checking means for checking a storage capacity of the set first or second portable electronic device to determine whether application data desired by a holder can be downloaded when the
10 data showing the completion of setting of the first portable electronic device or a second electronic device differing from the first electronic device is received by the receiving means as a portable electronic device to download the application;

wherein the application data is read by the reading means
15 when it is judged by the capacity checking means that the application can be downloaded, the transmission of the application by the transmitting means is executed and when the download is judged not feasible by the capacity checking means, another portable electronic device is set by the setting demand means.

20 10. The service providing system according to Claim 7, wherein the reading means includes:

means for judging whether the set portable electronic device is the first portable electronic device or a second portable electronic
25 device differing from the first electronic device when the data showing the completion of the setting of a portable electronic device

to download application is received by the receiving means; and

means for creating information relative to the individual data stored in the first portable electronic device and directing storage of this relative data in the second portable device is judged by the
5 judging means as the second portable electronic device;

wherein the reading of an application desired by a holder from the memory is executed when the set portable electronic device is judged by the judging means to be the first portable electronic device or when the data showing the completion of the storage of
10 relative data in the second portable electronic device is received by the receiving means.

11. The service providing system according to Claim 7,
further comprising:

15 provision demanding means for demanding provision of data including at least individual data stored in the portable electronic device when the provision of services using the portable electronic device is directed by the terminal device;

holder checking means for checking whether a holder of the
20 portable electronic device has the right to receive the service based on the data stored in the portable electronic device when the data stored in the portable electronic device is received in response to the demand by the provision demanding means;

means for providing service data desired by the holder of the
25 portable electronic device when the holder is judged to have the right to receive services by the holder checking means; and

means for advising the holder of the portable electronic device to download an application required for receiving the service when the holder is judged to have no right to receive the services checked by the checking means.

5

12. The service providing system according to Claim 11, wherein the service providing means includes:

means for presenting desired services in a first form to provide service data at a first price indefinitely and a second form to provide
10 service data at prices lower than the first price for a limited period in connection with the provision of service data desired by the holder; and

means for directing the download of service data to the portable electronic device when the first form is selected when the
15 service data providing forms are presented by the presenting means and directing the download of service data and data relative to the using period to the portable electronic device when the second form is selected.

20 13. A service providing method for providing services to the holder of the portable electronic device via the terminal device that handles the portable electronic device based on the portable electronic device having a memory storing application data relative to provision of services and pre-storing at least individual data of
25 the holder by a prescribed organization, comprising the steps of:

checking justifiability of the portable electronic device based

on the data store in the portable electronic device when the
download direction is received from the terminal device;

judging whether the holder has the right to vote from the data
stored in the portable electronic device when the portable electronic
5 device is confirmed to be justifiable;

reading the application data relative to the vote from the
memory when the holder is judged to have the voting right;

directing the terminal device to download the application to
the portable electronic device and transmitting the read application
10 data relative to the vote; and

accepting the accessed data relative to the vote using the
portable electronic device with the application relative to the vote
downloaded.

15 14. The service providing method according to Claim 13,
further comprising:

judging whether a date or time data when the download of
application is directed is within the pre-set period for downloading
the application when the direction for downloading the application
20 is received from the terminal device; and

executing the step to check justifiability of the portable
electronic device based on the data stored in the portable electronic
device when it is judged that the application can be downloaded in
the period.

25

15. A service providing method according to Claim 13,

wherein the reading step includes:

demanding the setting of a portable electronic device to which the application data relative to the vote is downloaded when the holder is judged to have the voting right;

5 judging whether the set portable set electronic device is the first portable electronic device or the second portable electronic device differing from the first portable electronic device when the information showing the setting completion of the portable electronic device to which the application is downloaded; and

10 creating data relative to the individual data stored in the first portable electronic device, transmitting this relative data and directing to store it in the second portable electronic device when the set portable electronic device is judged as being the second portable electronic device as a result of the judgment;

15 wherein the application data relative to the vote is read from the memory when the set portable electronic device is judged as being the first portable electronic device as a result of the judging step or when the information of the completion of storage of the relative data in the second portable electronic device is received.

20

16. The service providing method according to Claim 13, wherein the accepting step includes:

checking justifiability of the portable electronic device based on the data stored in the portable electronic device and checking
25 whether the application relative to the vote is downloaded when the voting directive data by the holder is received;

checking justifiability of the holder based on the code data of the holder when the first portable electronic device is judged as being justifiable and it is confirmed that the application is downloaded in the checking step;

5 accepting the data relative to the vote received by the receiving means when the holder is confirmed to be justifiable by the checking step.

10 17. The service providing method according to Claim 13, further comprising:

directing the invalidation of the application relative to the vote downloaded in the portable electronic device by changing it to the unusable state when the acceptance of the data relative to the vote is completed in the accepting step.

15

18. A service providing system for providing services to a holder of the portable electronic device via the terminal device that handles the portable electronic device using the portable electronic device pre-storing at least the individual data of the holder by a
20 prescribed organization comprising:

means for storing application data relative to the vote to be provided;

25 means for receiving the directive data of the downloading of the application relative to the vote and the data stored in the portable electronic device by the terminal device;

means for checking justifiability of the portable electronic

device based on the data stored in the portable electronic device
received by the when the directive data for the download is received
by the receiving means;

means for judging whether the holder of the portable electronic
5 device has the right to vote from the data stored in the portable
electronic device when the portable electronic device is confirmed to
be justifiable by the checking means;

means for reading application data relative to the vote from
the memory when the holder is judged to have the voting right by
10 the voting right judging means;

means for directing the terminal device to download the
application to the portable electronic device and transmitting the
application data relative to the vote that is read by the reading
means; and

15 means for accepting the data relative to the vote that is
accessed using the portable electronic device to which the
application relative to the vote is downloaded.

19. The service providing system according to Claim 18,
20 wherein the checking means includes:

means for judging whether the directed downloading is within
the pre-set downloading period is judged from the date or time
information directing the download when the direction is received by
the receiving means; and

25 means for checking justifiability of the portable electronic
device based on the data stored in the portable electronic device

received by the receiving means when the directed is judged by the period judging means as being the period during which the download can be made the period when the download can be made.

5 20. The service providing system according to Claim 18, wherein the reading means includes:

 means for demanding the setting of a portable electronic device to which the application data is downloaded when the holder of the portable electronic device is judged to have the voting right by the
10 vote right judging means;

 means for judging whether the set portable electronic device is the first portable electronic device or the second portable electronic device differing from the first electronic device when the information showing the completion of setting of the portable
15 electronic device to which an application is downloaded is received by the receiving means; and

 means for creating data relative to the individual data stored in the first portable electronic device, transmitting the created relative data and directing to store the relative data in the second
20 portable electronic device;

 wherein when the set portable electronic device is judged to be the first portable electronic device by the judging means or when the information showing the completion of the storage of relative data in the second portable electronic device is received by the receiving
25 means, the application data desired by the holder is read from the storing means.

21. The service providing system according to Claim 18,
wherein the accepting means includes:

first checking means for checking justifiability of the portable
5 electronic device based on the data received by the receiving means
and stored in the portable electronic device when the vote directive
data is received by the receiving means;

second checking means for checking whether the application
relative to the voting is downloaded based on the data received by
10 the receiving means and stored in the portable electronic device
when the voting directive data is received by the receiving means;
and

third checking means for checking justifiability of the holder
based on the code data of the holder received by the receiving means
15 when the voting directive data is received by the receiving means;

wherein when the first checking means confirms that the first
portable electronic device is confirmed to be justifiable, the second
checking means confirms that the application is downloaded, and
the third checking means confirms that the holder is justifiable, the
20 data relative to the vote received by the receiving means is accepted.

22. The service providing system according to Claim 18,
further comprising:

means for directing the invalidation of the application relative
25 to the voting that is downloaded on the portable electronic device by
changing the application to the unusable state when the accepting of

the data relative to the voting is completed by the accepting means.
